Education

B.Tech in Computer Science (Specialization in Cybersecurity) — *2023 – 2027 (Expected)*
GITAM University, Visakhapatnam

12th Grade — *2021 – 2023*
Narayana Junior College, Visakhapatnam

10th Grade — *Completed 2021*
Ravindra Bharathi School, Visakhapatnam

Experience

Full Stack AI Engineering Intern — *Remote*
Evanrios Projects — *June 2025 – January 2026*

- Built and deployed LapromConnect (lapromconnect.evanriosprojects.com), a multilingual restaurant management system (React front end, Node.js/TypeScript back end) covering delivery, inventory, branch, stock, and user management via RESTful APIs, with English-Spanish support and role-based access control.
- Engineered the Trigent AI dashboard (app.trigentai.com), a multi-agent system of three specialized AI agents (BI, AI, GX) that autonomously run business automation, market analytics, competitor analysis, and growth prediction for enterprises, with tool/API execution and human-in-the-loop oversight.
- Delivered the production platform for Glowbiz Displays (glowbizdisplays.com), a Los Angeles digital-out-of-home ad network: an advertiser campaign dashboard with artwork upload, a human-in-the-loop ad review and approval workflow, QR-code generation, and real-time scan and visit analytics.
- Designed and shipped the production website for an entertainment enterprise client (rioneyentertainment.in), with separate admin, employee, and client dashboards, integrated payment processing, secure credential sharing, and a project management module.
- Implemented end-to-end testing with Playwright for critical workflows (healthcare-grade reliability and security) and documented code/API integrations; collaborated cross-functionally via daily scrums, sprint planning, and Git-based code reviews.

Full Stack Developer — *Remote*
SUG Creative — *September 2024 – Dec 2025*

- Partnered directly with clients across 10+ projects, sitting in requirements discussions, translating their business needs into shipped technical solutions, and achieving a 100% satisfaction rate.
- Developed a full-stack multi-role management dashboard (sugcreative.com/login) for students, interns, clients, and employees, giving each role its own dashboard with task tracking and meeting scheduling.
- Built a centralized admin dashboard for managing payslips, issuing certificates, and administering all users, employees, and mentors across the organization.

Technical Lead — *Visakhapatnam*
CHITTI — *September 2024 – Present*

- Owned the product and full technical delivery of CHITTI (scorewithchitti.in), a full-stack academic support platform serving 9,550+ students, driving 186% user growth and 1500+ paid subscribers across 3 product iterations.
- Built an automated content pipeline for video editing and compression, cutting manual production effort and speeding up content turnaround for the platform.
- Developed an internal SME (Subject Matter Expert) management dashboard to onboard, coordinate, and track content contributors, streamlining internal operations.
- Increased user engagement by 25% through feature-driven development, generating 3L+ revenue from a premium subscription tier.

Web Designer and Developer *Remote*
Young Compete *May 2024 – December 2024*

- Optimized site performance by 30%, improved design aesthetics, and implemented advanced full-stack features enhancing user engagement and retention by 20%; recognized as Top Performer of 2024.

Cybersecurity Intern *Remote*
Intrainz *March 2024 – May 2024*

- Gained hands-on experience in cybersecurity, mastering tools like Metasploit, Nmap, and learning Linux and other security frameworks.

Projects

parda — Local PII Filter for AI Agents *Rust, Python, ONNX, ML*

- Built a local, real-time privacy layer between users and AI agents (Claude Code, Codex, Anthropic/OpenAI SDKs, chat apps): names, contacts, Indian IDs (Aadhaar, PAN, GSTIN, UPI, IFSC) and secrets become format- and checksum-valid surrogates before leaving the machine, then are restored in the model's answers and tool calls.
- Engineered a three-tier detection engine (Aho-Corasick dictionary → checksum-validated rule packs → on-device GLiNER-PII ONNX NER at ∼9 ms p95), with fail-closed safety by default, an encrypted mapping vault (XChaCha20-Poly1305, key in the OS keychain), and streaming SSE rewriting that restores values even when tokens split across chunks.
- Shipped a local proxy and clipboard hotkey for agent workflows, keeping observability to event kinds, counts and timings (never values), with supply-chain CI (cargo-deny, end-to-end and coverage jobs) and Python fine-tuning/evaluation scripts for the detector model.

Mitosis — Run Separate Copies of Mac Apps *Swift 6, SwiftUI, macOS*

- Built a native macOS 15+ application (Swift 6 / SwiftUI) that runs separate copies of Mac apps side by side, each with its own login, data folder and Dock icon, using an APFS clone engine that shares unchanged disk blocks so a copy typically costs only a few megabytes.
- Implemented per-clone identity (own bundle ID and name), ad-hoc re-signing of only changed files, a launch-verification step that removes copies that fail to start, and a low-CPU background job that rebuilds copies after the original app updates without losing logins.
- Shipped a `mitosis` CLI (doctor/clone/list/stats/clean/refresh/delete), a one-line installer with SHA-256 checksum and signature verification, and automated release packaging.

Skills

Customer-Facing: Requirement gathering, solution scoping, product demos & technical walkthroughs, architecture discussions, onboarding, deployment, technical documentation
Languages & APIs: Python, JavaScript/TypeScript, Node.js, RESTful APIs, GraphQL, Postman, data integrations
Deployment & Cloud: AWS, Google Cloud, Docker, Kubernetes, CI/CD, Vercel, Firebase
Frontend & Dashboards: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Framer
Databases: MongoDB, PostgreSQL, Supabase
AI & Automation: Claude Code, ChatGPT, Cursor, agentic workflows, RAG pipelines, prompt engineering, AI-assisted log analysis & debugging
Robotics & Hardware: Raspberry Pi 4, NVIDIA Jetson Nano, computer vision, voice-controlled physical AI, reverse engineering
Tools: Git, GitHub, Playwright, Figma, VS Code, Agile/Scrum

Achievements

- 1st Runner-Up – Technovate (India Student Conclave by Times of India), 40,000 prize money
- 2nd place – Bio Med Bharat with a 50,000 cash prize, for building an AI-powered child developmental and nutritional risk assessment app
- Achieved 2nd place in coding competition, earning 5,000 prize money for building an AI mock test platform
- Recognized as Top Performer of 2024 at Young Compete for outstanding web development contributions
